Technology permeates every sector of today’s economy and is constantly being improved and updated. In this environment, innovation gives researchers, companies and entrepreneurs leverage to disrupt and succeed. The Corporate Strategy for New Markets graduate degree offers students a unique opportunity to understand the transformations that are taking place across markets and competitive business environments, based on quantitative economic methods.

Principally an economics degree, students also gain a firm grasp of the dynamics of technological innovation in business and organizational contexts and leave with a complete quantitative toolbox and economic analysis skillset to complement their technical background. A wide range of career choices are open to Corporate Strategy for New Markets degree graduates, from Strategic Business Unit leaders to strategy consultants or entrepreneurs. Graduates will leave with the knowledge to navigate the trends shaping the 21st-century digital economy.
Through high-level coursework, research projects and internships, our students acquire two complementary skill sets: how to apply quantitative methods—including statistics and operations research—to competitive environments in new and transforming markets, and how to understand corporate strategy in situations of discontinuity and disruption from a sophisticated economics base. This training relies both on courses on economic methodology comprising industrial organization, econometrics, and financial markets, and on practical ‘field courses’ that set out to study the challenges faced by different sectors in greater depth so as to uncover hidden trends in specific market segments and business models. Our wide-reaching network of industrial partners results in key industry insights from leading business figures, as well as in numerous internship opportunities for students. Finally, our students spend up to nine months of their degree program honing their new skills in a professional environment, receiving one-on-one guidance from their tutors and mentors.
